

■ Git Cheat Sheet

■ Setup & Configuration

git config --global user.name "Your Name" → set your name
git config --global user.email "your@email.com" → set your email
git config --list → view current config

■ Starting a Repo

git init → initialize a new Git repository
git clone → clone a repository from remote

■ Basic Snapshotting

git status → check status of changes
git add → stage a file
git add . → stage all changes
git commit -m "message" → commit staged changes
git commit -am "message" → add + commit tracked files in one step

■ Branching & Merging

git branch → list branches
git branch → create a new branch
git checkout → switch to a branch
git switch → (newer way to switch branches)
git merge → merge a branch into current one
git branch -d → delete a branch

■ Viewing History

git log → show commit history
git log --oneline --graph --all → compact, visual history
git diff → show unstaged changes
git diff --staged → show staged changes

■ Remote Repositories

git remote -v → list remotes
git remote add origin → add a remote repo
git push origin → push commits to remote
git pull origin → fetch + merge changes from remote
git fetch → fetch remote changes (without merging)

■ Undoing Things

git restore → discard local changes

git reset HEAD → unstage a file

git revert → create a new commit undoing a previous one

git reset --hard → reset repo to a specific commit (DANGEROUS – deletes history)

■ Stashing (Temporary Save)

git stash → save uncommitted changes

git stash pop → reapply last stashed changes

git stash list → show stashed changes
